                                                                                                                                              셤
                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                 This invention describes a novel nucleic acid encoding a plant nucleobase transporter (1). (1) is produced by complementation of a nucleobase transport (MBT)-defective host cell with a plant gene bank by selection of NBT-positive cells. (1) is used to isolate homologous sequences from bacteria, fungi, plants, animals and humans, for expression of the encoded protein (11) in prokaryotic or eukaryotic cells, for inhibiting expression of (II) (when in antisense orientation), and to produce transport crop plants. The transpenic plants have modified nucleobase transport properties, e.g. altered affinity and substrate specificity that may result in more efficient nucleobase transport in leaves, changes in apical dominance, flowering behaviour and senescence, or improved distribution of pesticides. This sequence encodes the Arabidopsis thaliana PUPI protein which is described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                408

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel nucleic acid encoding a plant nucleobase transporter (I). (I) is produced by complementation of a nucleobase transport (NBT)-defective host cell with a plant gene bank by selection of NBT-positive cells. (I) is used to isolate homologus sequences from bacteria, fungi, plants, animals and humans, for expression of the encoded protein (II) in prokaryotic or enkaryotic cells, for inhibiting expression of (II) (when in antisense orientation), and to produce transgenic crop plants. The transgenic plants have modified nucleobase transport properties, e.g. altered affinity and substrate specificity that may result in more efficient nucleobase transport in leaves, changes in apical dominance, flowering behaviour and senescence, or improved distribution of pesticides. This sequence encodes the Arabidopsis thaliana PUPI protein which is described in the method of the invention
                                                                                                                                                                                                                                                                      898 Traaaggrgarricrargarricragcrarricgegerricgrarccrargrcraccaacaa 957

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     810
                             This invention describes a novel nucleic acid encoding a plant nucleobase transporter [1]. (I) is produced by complementation of a nucleobase transport (NBT)-defective host cell with a plant gene bank by selection of NBT-positive cells. (I) is used to isolate homologous sequences from bacteria, fungi, plants, animals and humans, for expression of the encoded protein (II) in prokaryotic or eukaryotic cells, for inhibiting expression of [II] (when in antisense orientation), and to produce transgenic crop plants. The transgenic plants have modified nucleobase transport properties, e.g. altered affinity and substrate specificity that may result in more efficient nucleobase transport in leaves, changes in apical dominance, flowering behaviour and senescence, or improved distribution of pesticides. This sequence encodes the Arabidopsis thaliana PUP1 protein which is described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    630

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) array or probes representative of the plant cell genome; and (b) characteristic of a stress response. The method is useful in the characteristic of a stress response. The method is useful in the plants production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abicic stress. The present sequence is that of an Arabidopsis thalians stress regulated gene (AB212196-AB217574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      495
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  450
Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        496 rigeletifeletifetetataritretaaaeredekaakitekekeritearr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          450
                                                                      t t
                                                                                                                                                                                                                                                             The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                390

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method (MI) for identifying genes involved in plant resistance or response to pathogenic infection. MI comprises identifying agene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to a bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             330 cerecirces as de consecuences de consecuences de consecuences de consecuences de consecuencia de consecuen

The invention relates to an isolated nucleic acid molecule (I), maize yellow stripe 1 (ys1) or yellow stripe1-like (ys1) from Arabidopsis (ABN85763-ABN85771). (I) is useful for generating transgenic plants which can be used for enhancing iron uptake from soil and for bioremediation of metal or heavy metal contaminated soil. (I) may also be used to alter the distribution of iron within the plant body so that edible parts of crop plants have more iron. Transgenic plants may also be used in conventional plant breeding schemes to produce progeny which also contain the gene of interest. The present sequence is that of the Arabidopsis ysl encoding New yellow stripel and yellow stripel-like genes, useful for altering the distribution of iron within the plant body so that edible parts of crop plants have more iron, or for producing plants useful in enhancing iron uptake from soil. Claim 1; Page 114-159; 187pp; English Dellaporta WPI; 2002-490144/52 P-PSDB; ABB83920 Walker EL,

Patent No. 6605709
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: GARY BRETON
TITLE OF INVENTION:
NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.1002-001
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT FILING DATE: 1999-04-05
PRIOR APPLICATION NUMBER: US 60/128,706
PRIOR FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344

Sequence 3946, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS

TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US 60/064,964

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-08-14

NUMBER OF SEQ ID NOS: 5674

SEQ ID NO 3948

Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms.

Claim 5; SEQ ID NO 367; 261pp + Sequence Listing; English.

The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as

This invention describes a novel nucleic acid encoding a plant nucleobase transporter (I). (I) is produced by complementation of a nucleobase transport (NBT)-defective host cell with a plant gene bank by selection of NBT-positive cells. (I) is used to isolate homologous sequences from bacteria, fungi, plants, animals and humans, for expression of the encoded protein (II) in prokaryotic or eukaryotic cells, for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                            for producing transgenic plants with altered encodes a nucleobase transporter protein of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      22-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8-JUN-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -NUV-8
           expression of (II) (when in antisense orientation), and to produce transgenic crop plants. The transgenic plants have modified nucleobase transport properties, e.g. altered effinity and substrate specificity that may result in more efficient nucleobase transport in leaves, changes in apical dominance, flowering behaviour and sensecence, or improved distribution of pesticides. This sequence represents the Arabidopsis thaliana PUP1 protein which is described in the method of the invention
